

APPLICATION BLUEPRINTS

1 Purpose of This Part

While Parts 1–5 define *how to think, phrase, and self-correct*, Part 6 defines *how to operationalize*. It translates the philosophy into a working suite of repeatable mechanisms: templates, checklists, scorecards, AI instruction syntax, and reflection loops.

The part answers:

“How can I reliably build, test, teach, and refine MIMIR-grade messages—alone or through machines?”

2 Meta-Objectives

- 1. Turn conceptual mastery into executable workflows usable by individuals, teams, and AI systems.
 - 2. Standardize message-build and message-review rituals.
 - 3. Create transparent scoring systems for quality, coherence, and authenticity.
 - 4. Establish AI-ready prompt structures so automation reinforces—not replaces—judgment.
 - 5. Install reflective loops that preserve learning across projects and people.
-

3 Structural Flow of Part 6

Layer	Title	Function
1	Message-Build Checklist	Universal template to design messages from scratch using all MIMIR layers.
2	Quality-Control Rubric	Objective scoring grid for coherence, clarity, tone, structure, ethics, and impact.
3	“Why it Works” Explainers	Deconstruct examples to connect effect → cause → psychological principle.
4	AI Prompt Embedding Syntax	Framework to train AI models to replicate MIMIR reasoning safely.
5	Self-Audit & Reflection Grids	Guided self-coaching tools for skill retention and behavioral awareness.
6	Seniority, Tenure & Hierarchical Sensitivity Grid	Blueprint for tailoring message design by experience level and power distance.

4 Detailed Descriptions of Each Layer

Layer 1 – Message-Build Checklist

- Integrates every rule from Parts 1–5 into a sequential build process.
- Divided into **12 checkpoints**:
 1. Define single-sentence intent.
 2. Identify receiver's state (belief, bias, bandwidth).
 3. Choose dominant tone mode (from Part 3).
 4. Draft frame sequence (Intention → Context → Emotion → Payoff).
 5. Select sentence rhythm pattern (Part 2).
 6. Insert contrast anchor (Part 1).
 7. Add consequence map.
 8. Test C³ Triangle (Clarity–Curiosity–Contrast).
 9. Score Authenticity & Ethical Integrity.
 10. Calibrate platform constraints (Part 4).
 11. Run bias pre-check (Part 9 input).
 12. Final read-aloud and sensory test.
- Produces a **Message-Readiness Scorecard** combining qualitative and quantitative markers.

Layer 2 – Quality-Control Rubric

- Builds a 100-point scale with six weighted categories:
 - Framing (20)
 - Phrasing (20)
 - Tone (15)
 - Context (15)
 - Integrity (15)
 - Impact (15)

- Defines rating descriptors for each band (Excellent / Adequate / Needs Repair).
- Includes **Multi-Rater Mode** for team reviews.
- Creates visual “heat-map” output showing strengths vs. leaks.
- Ensures quality is measurable, not opinion-based.

Layer 3 – “Why it Works” Explainers

- Takes real examples and breaks them into causal anatomy:
 - *Trigger → Emotion → Language → Perception → Action.*
- Demonstrates both success and failure cases.
- Adds a *Principle Tag* system (e.g., [Contrast-Anchor], [Empathy-Reversal], [Tension-Drop]).
- Intended for enablement programs and AI training datasets.

Layer 4 – AI Prompt Embedding Syntax

- Formalizes how to instruct LLMs using MIMIR’s reasoning chain.
- Each prompt structured as:
 1. **Frame:** desired belief/behavior change.
 2. **Constraints:** tone, audience, cultural context, ethical limits.
 3. **Logic Path:** required sequence of reasoning steps.
 4. **Output Map:** deliverable types + validation metrics.
- Defines **Safety Envelope** to prevent exaggeration, moralizing, or false empathy.
- Provides *Reinforcement Loop Syntax*—prompts that critique their own output against rubric metrics.
- Enables consistent AI-assisted drafting and evaluation.

Layer 5 – Self-Audit & Reflection Grids

- Converts intuition into routine.
- Grids include:
 - *Tone Reflection Grid:* “What emotion did I project vs intend?”
 - *Consequence Awareness Grid:* “What risk did I surface or hide?”
 - *Persona Empathy Map:* “Did I mirror or impose?”

- *Energy Drift Meter*: self-rated attention during writing.
- Encourages daily post-send retrospection.
- Supports longitudinal learning when integrated into coaching or journaling tools.

Layer 6 – Seniority, Tenure & Hierarchical Sensitivity Grid

- Expands on earlier sketch; now formalized with **five analytical lenses**:

Lenses	Focus	Application
1	Experience Gradient	Early-Career (seek validation), Mid-Career (seek efficiency), Senior (seek respect), Executive (seek control & legacy).
2	Perception of Authority	How language of confidence or humility shifts credibility.
3	Cognitive Load & Time Horizon	Adjust message density: more brevity as hierarchy rises; more narrative for developmental contexts.
4	Internal vs External Etiquette	Inside org → informal empathy; Upward → precision & brevity; Board-level → proof & consequence.
5	Cultural Cross-Overlay	How age/seniority interacts with collectivist (status-sensitive) vs individualist (efficiency-driven) cultures.

- Produces **Seniority Calibration Table** mapping tone temperature, pace, and proof ratio for each level.
- Integrates seamlessly with Part 7's cultural tailoring to form *MIMIR Persona Grid 2.0*.

5 Edge Case Coverage

- **Multi-Seniority Meetings**: mixed hierarchy messaging; balancing assertiveness with inclusion.
 - **AI-Generated Content**: ensuring machine phrasing aligns with human ethical and tone standards.
 - **Fast-Growth Startups**: collapsing hierarchy norms and adjusting etiquette speed.
 - **Global Corporates**: handling ritualized formality without losing sincerity.
 - **Coaching Feedback**: using reflection grids for manager-rep conversations.
-

6 Inter-Dependencies

- Consolidates all principles from Parts 1–5 into usable tools.
 - Outputs feed directly into Parts 7–12 for persona tailoring, bias calibration, evolution loops, and narrative physics.
 - Acts as the **testing bed** where new messaging models are scored before deployment.
-

7 Exclusions

- Does not address persona or cultural tailoring in depth (Part 7).
 - Leaves cognitive bias countering to Part 9.
 - Avoids structural format decisions (Part 8).
-

8 Deliverables from This Part

1. **Universal Message-Build Template v1.0**
 2. **MIMIR Quality Rubric 100-Point Grid**
 3. **Why-it-Works Case Library Sheets**
 4. **AI Embedding Prompt Library (Syntax Guide)**
 5. **Self-Audit & Reflection Dashboard Template**
 6. **Seniority & Hierarchy Sensitivity Matrix**
-

9 Summary of Intent

Part 6 transforms theory into machinery.

It institutionalizes craftsmanship by embedding every decision—tone, rhythm, emotion, ethics—into checklists, metrics, and syntax that any human or AI can follow.

When mastered, MIMIR becomes not a set of rules but a **living calibration ecosystem**:

“If the message can be tested, it can be trusted.”

****Part 6 Add-On**

QC and Rubric Integrity Checks**

1. When scoring, score only what the user provided.

No deduction for things they did not intend.

2. Avoid introducing new criteria beyond the MIMIR rubric.

3. Keep reflection grids tied to the text, not imagination.

4. Clearly label all feedback that contains interpretation.

5. Visual Safety.

QC must not treat imagery as mandatory unless user needs visuals.
